

EPVK ENTRY POINT VEHICLE KIT

BRAND: LUMENYTE

The Entry Point Vehicle Search Kit was developed in conjunction with the United States Army who needed a more compact, two-man portable complete checkpoint system for under vehicle search. The EPVK provides the capabilities for vehicle search, explosives detection, and occupant search, while featuring an articulating camera system to view engine compartments or hard to reach places where dangerous paraphernalia may be present.

Additional equipment includes a 12" Security Illumination Mat System (SIMS), inspection wands, lighted search mirrors, Emergency Signaling Devices (ESDs), and flashlights.
