

LIBERATOR III BASIC - TACP/JTAC SECURE DUAL-COMM TACTICAL HEADSET

BRAND: TCI

The Liberator III? Basic Headset Suite is an expandable dual communications system that is a slightly scaled-down version of the ITJCS Headset Suite. It features an integrated Cobra microphone and lip light for added functionality. The push-to-talk (PTT) assembly provides Dual Communications Functionality that eliminates unnecessary cables and components by combining PTT technology into a single headset cable and enclosure with color-coded buttons to allow the user to focus on their mission.

First, the Digital Threat Compression Technology (DTCT) and REV6 processor is able to safely reduce hazardous sounds approximately 82 dB without dampening all the sounds in the environment. Secondly, the Digital Situational Awareness Enhancement (DSAE) allows the operator to localize environmental sounds, even when receiving incoming communications and with hearing protection enabled. These combined technologies provide 360° of incredible ambient sound reproduction and acoustical situational awareness, which help in threat identification and replicating natural hearing while simultaneously providing automatic hearing protection.

The headset is compatible with various MICH, ACH-Warrior, and most popular styles of helmets, as well as with an O2 mask.
