

TRAFFIC CONTROL INTERSECTION CLOSURE MODULE

BRAND: AARDVARK

Designed to shut down a two-way four lane intersection, the Traffic Control Module is for use from everything from traffic signal outages to major planned events to emergency situations. This module contains A-frame barriers, electronic flares with additional batteries, stop and detour signs, traffic cones, and safety vests all integrated into two hard plastic cases.

This module can be used in conjunction with additional Traffic Control Modules to help control larger intersections.
